### DETAILED ACTION

#### *Claim Rejections - 35 USC § 103*

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 1-10 are rejected under 35 U.S.C. 103(a) as being unpatentable over McCormick et al. (U.S. Patent No. 6,023,723) in view of "Here is a zmail ban-spam button" (07 October 1997).

In the claim 1, McCormick et al. discloses a system for policing an unsolicited e-mail (filter junk e-mails)(see figure 3) comprising:

- ◆ a plurality of clients (17, 19), each coupled together using a wide area network (Internet and/or intranet 11) of computer comprising an Internet; a policy server (central e-mail system 21) coupled to each of the plurality of clients (17, 19) through the wide area network (Internet and/or intranet 11) of computers;
- ◆ the policy server being adapted to receive the indication (updated filter addresses ) from the client to the policing server (see col.6, lines 33-38, col. 7, lines 45-48).

Art Unit: 2664

McCormick, however, does not disclose an icon on the display, the icon being adapted to send the indication from the client.

“Here is a zmail ban-spam button” (07 October 1997) discloses wherein the e-mail device comprises an SPAM icon (ban-spam button) on the display, the SPAM icon being adapted to send the indication from the client to the policing server (see “Here is a zmail ban-spam button”, to ban repeat spam, you only needs the procmail steps below. The zmail steps simply provide a push-button interface to ban repeat spam).

Thus, it would have been obvious to one of ordinary skill in the art at the time of the invention was made to modify the McCormick’s system with the teaching of “Here is a zmail ban-spam button” to provide an option icon on the display in order to help the client to speed up removing the Junk mail (SPAM). Therefore, the modified system would have been enable the policy server being adapted updated e-mail filter in response to each client notification.

5. In the claim 2, McCormick et al. discloses the policy server (figure 1, central location 46) is adapted to report the unauthorized e-mail message (unwanted e-mail message) (see col. 3, lines 55-56).

6. In the claim 3, McCormick et al. discloses the policy server is adapted to updated a local e-mail filter for the client (25) in response to the unsolicited e-mail (see col. 4, lines 49-56).

7. In the claim 4, McCormick et al. discloses each of clients (17, 19) comprises an updated e-mail filter from the policy server (central location 21) (see figure 3, col.4, lines 48-56).

Art Unit: 2664

8. In the claim 5, McCormick et al. discloses the policy server comprises a log of the unsolicited e-mail (see figure 3, col.4, lines 48-56).

9. In the claim 6, McCormick et al. discloses the unsolicited e-mail message is SPAM (see figure 2, col.4, lines 8-14).

10. In the claim 7, McCormick et al. discloses the display comprises a browser program, the browser program being coupled to the e-mail device (see figure 3, web browser or e-mail access application).

11. In the claim 8, McCormick et al. discloses each of the plurality of clients (17, 19) is for a different user, where each user is capable to sending the unsolicited e-mail message to the policy server (central location 21) (see col. 4, lines 49-56).

12. In the claim 9, McCormick et al. discloses the policy server (centralized server 21) comprises a plurality of SPAM filters (see figure 3, col.4, lines 49-56).

13. In the claim 10, McCormick et al. discloses each of clients (17, 19) is coupled to the wide area network (Internet 11) of computers through an Internet service provider (see figure 3).
